

## **Become Tomorrow's Rehabilitation Researcher! Join the Rehabilitation Medicine Scientist Training Program**

Where is the evidence base for rehabilitation treatments? How can we support the value of rehabilitation treatments and services with payors and policy makers? Rehabilitation research is the key, and well-trained rehabilitation researchers are needed for the job! The RMSTP is a NIH-supported program that develops physician scientists for successful careers in diverse aspects of rehabilitation research, ranging from the basic science of human cognition and movement to applied clinical studies to health services research. Operated in collaboration with the Association of Academic Physiatrists, the RMSTP is open to physicians of all specialties planning research programs focused on human function, disability, and rehabilitation. To learn more about eligibility, program structure, and how to apply, visit: [www.physiatry.org](http://www.physiatry.org) (click on Programs, then click on RMSTP), or contact Mary Czerniak, Program Coordinator, at [mary.czerniak@jefferson.edu](mailto:mary.czerniak@jefferson.edu) or (215) 663-6592.
